

# Usability

## *Positive Points*

- 🚦 Video tutorial is provided
- 🚦 The functioning is straight forward
- 🚦 The posts interaction is informative
- 🚦 Double tap to like the post is good to use
- 🚦 All are categorised(according to genres)
- 🚦 Nice themes

## *Negative Points*

- Notifications aren't functioning for follow, comment, like, share actions.
- OTP capturing is not automatic in this automated world.
- Feed is not prioritised according to followers which lead us to search the follower's name and see the posts.
- There's a confusion due to reverse symbols used in sharing and re posting.
- Taskbar looks kind of odd due to small symbol size.
- While swiping we can't say which pic we are seeing from the number of pics in a single post.
- If we view in full video mode, we are restricted to only that video.

# User experience

## *Positive Points*

- 🚦 It is good that everything is clearly navigable.
- 🚦 Usage of app is good as it isn't hanging, and the flow is smooth.

## *Negative Points*

- It could be safer, like having confirmation dialogues for reposting
- Some icons could be more intelligible
- The finish could be more sophisticated(the font could be more pleasing, spacing, better colours and contrast)
- In search, the icons/ graphics could be bigger for better experience than text

- Felt irritated in viewing pics(swipe, full screen)
